About Us

Kelly

Viktoria

Sunitha

We are a team of students from the ReDI School for Digital Integration, participating in a practical project aimed at delivering value to Arla Foods.

Our project focuses on enhancing data-driven decision +making and precision in marketing and product development efforts. By integrating and analyzing user interaction data from Arla Pro, Castello and Arla Unika websites, along with sales data from Castello and Unika product lines, we aim to provide comprehensive insights into customer engagement and product performance.

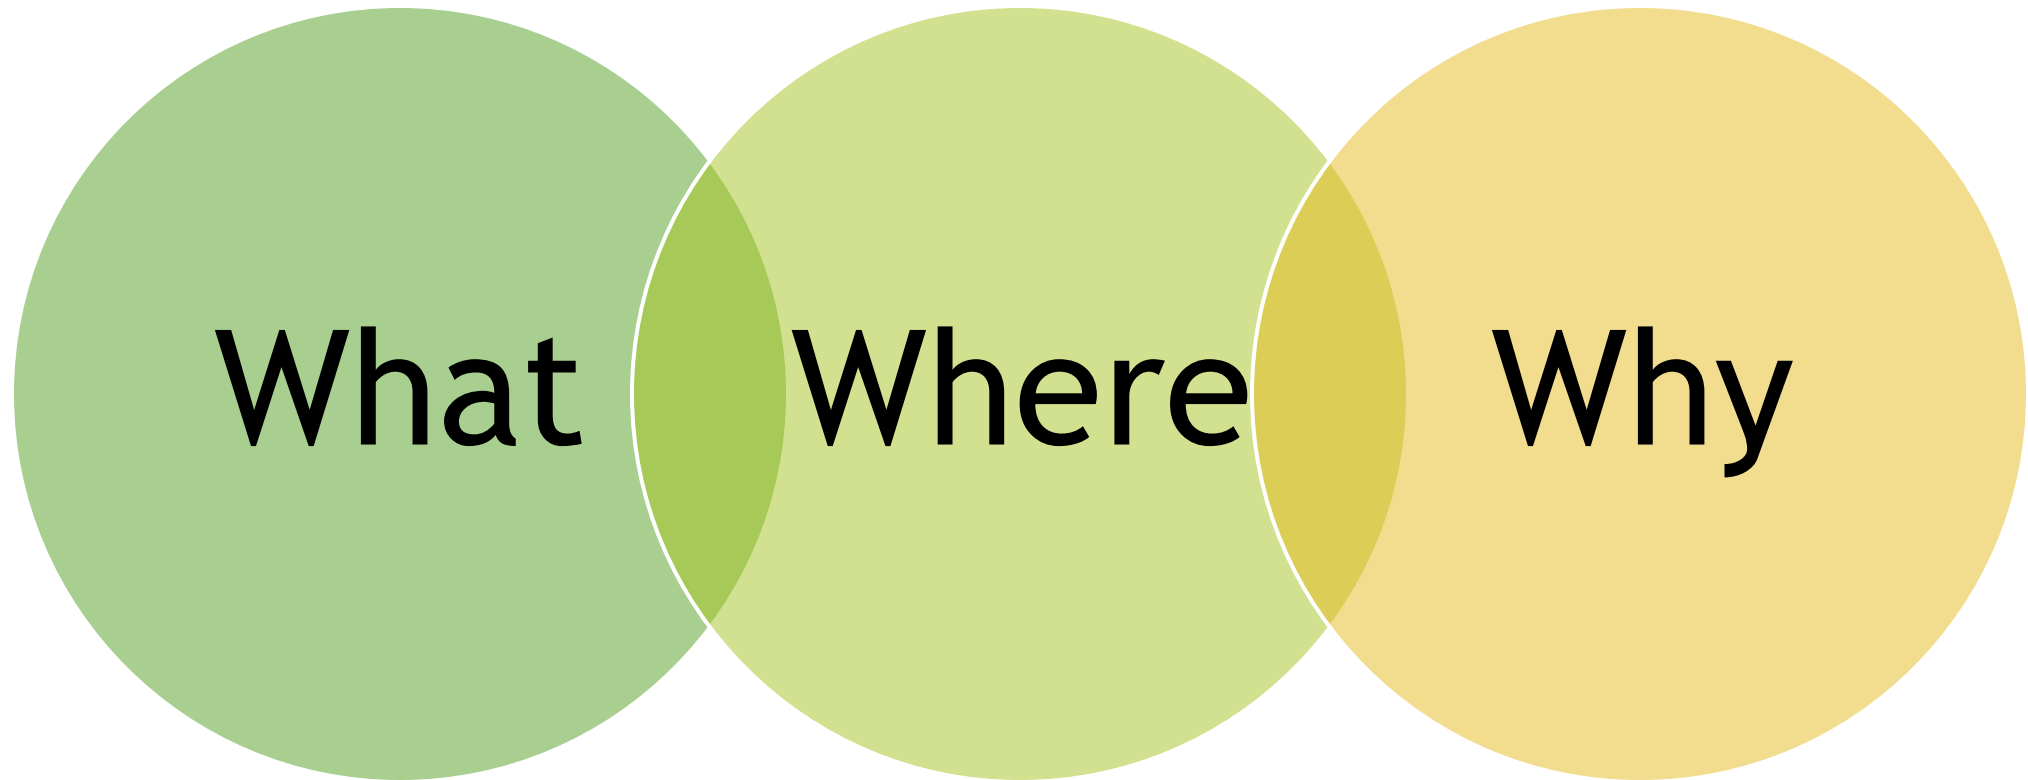

Through this project, we have built a strong data foundation to inform strategic decisions across Arla's brand and market segments. Our findings have led to actionable recommendations for targeted marketing initiatives.

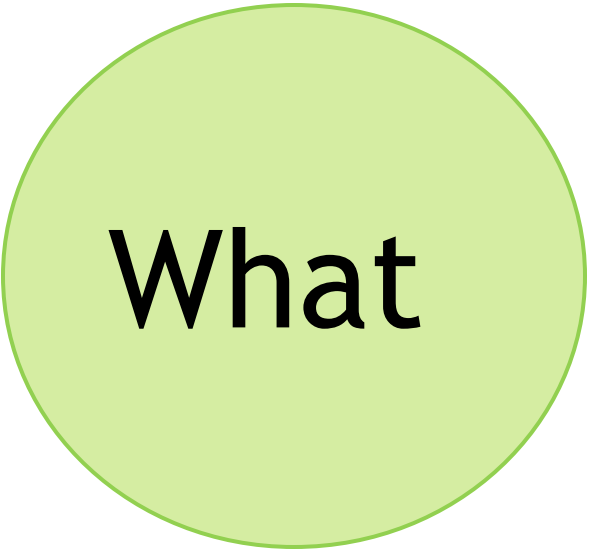

Our collaboration with Arla has not only reinforced our commitment to leveraging data for better decision-making but has also furthered our pursuit of excellence and innovation. We appreciate the opportunity to connect with Arla Foods and contribute valuable insights and recommendations to the organisation.

Executive Summary

- We analysed the website data from Arla Unika, Castello and Arla Pro.
- We cross-referenced with Danish sales data and found some locations where there is potential demand but no local outlets that sell direct to consumers.
- Arla Unika aims to elevate dairy to new culinary heights in collaboration with top gastronomic professionals
- We make recommendations of which Unika products might be attractive to chefs, and use sales data to highlight the cheeses that chefs' love, to either recommend to consumers or to prepare more production to anticipate potential high demand.
- We forecast sales and engagement based on website and sales data using Machine Learning

Contents

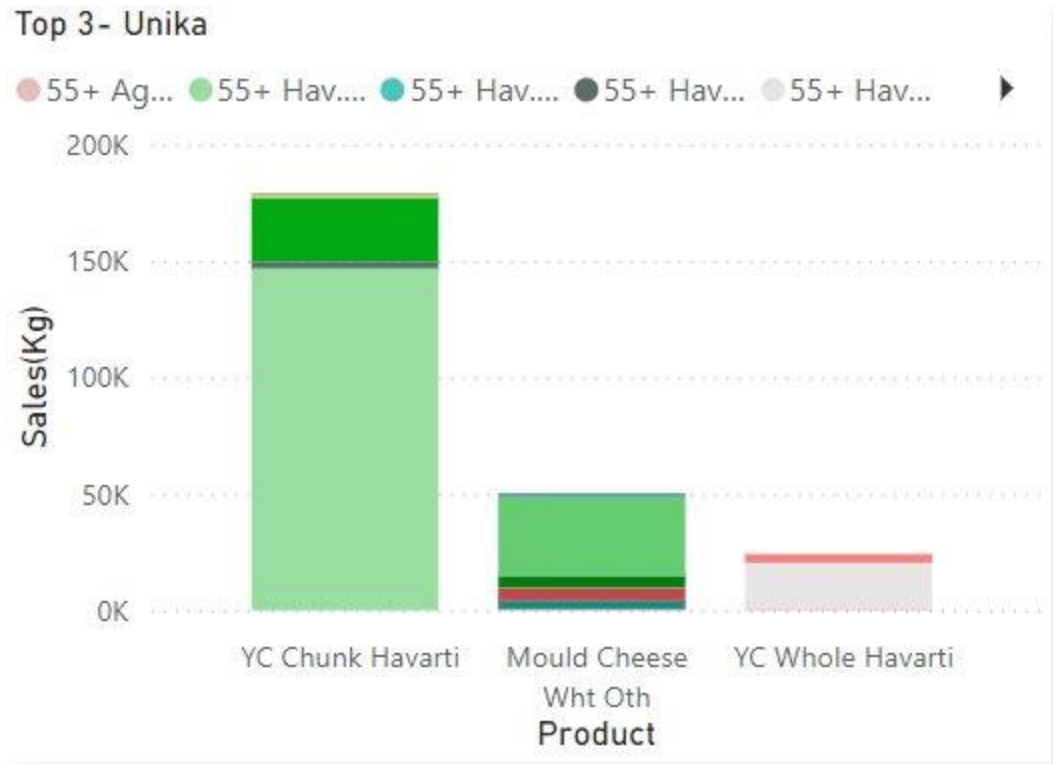

What

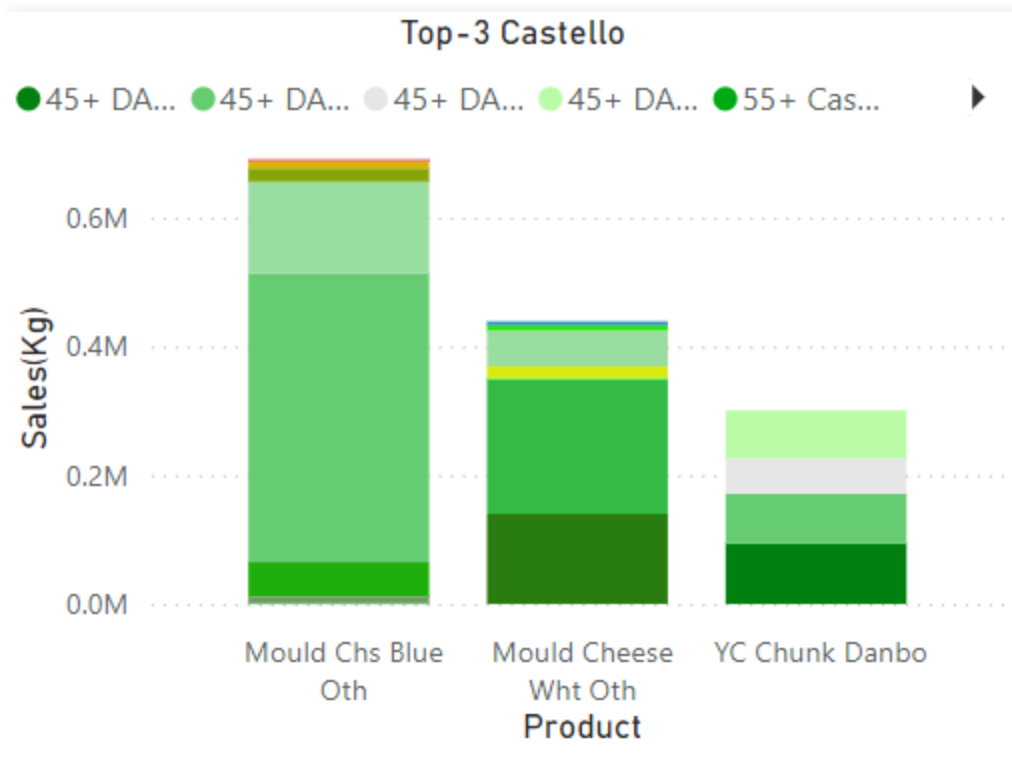

What is your favorite cheese ?

Best-Selling Cheeses from Unika

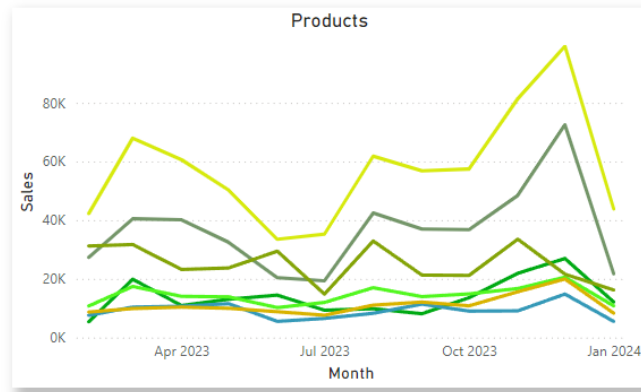

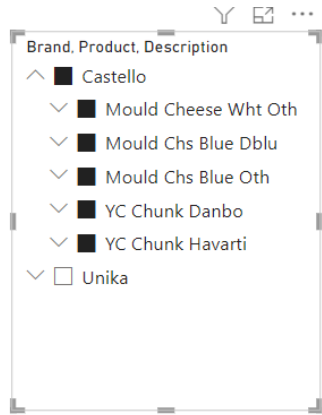

► The product YC Chunk Havarti is popular among both brands. Mould Cheese Wht Oth and YC Chunk Danbo have similar sales figures for both brands.

Best-Selling Cheeses from Castello

► The product YC Chunk Havarti is popular among both brands. Mould Cheese Wht Oth and YC Chunk Danbo have similar sales figures for both brands.

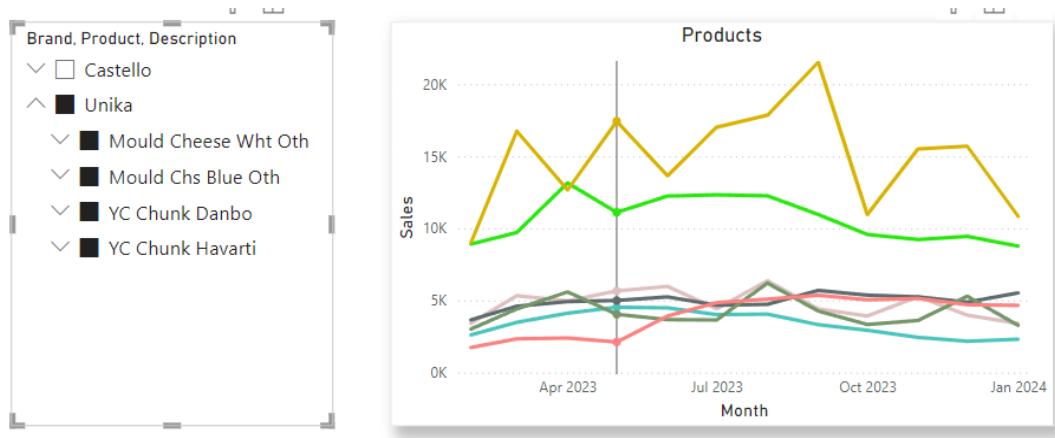

Seasonality

► Mould Cheese Wht Oth

- **Peak Sales:** March and November
- **Potential Reasons:**
 - **March:** Leading up to Easter, similar to YC Chunk Havarti.
 - **November:** Preparations for Christmas, where cheese is a popular item for festive dinners and gatherings.

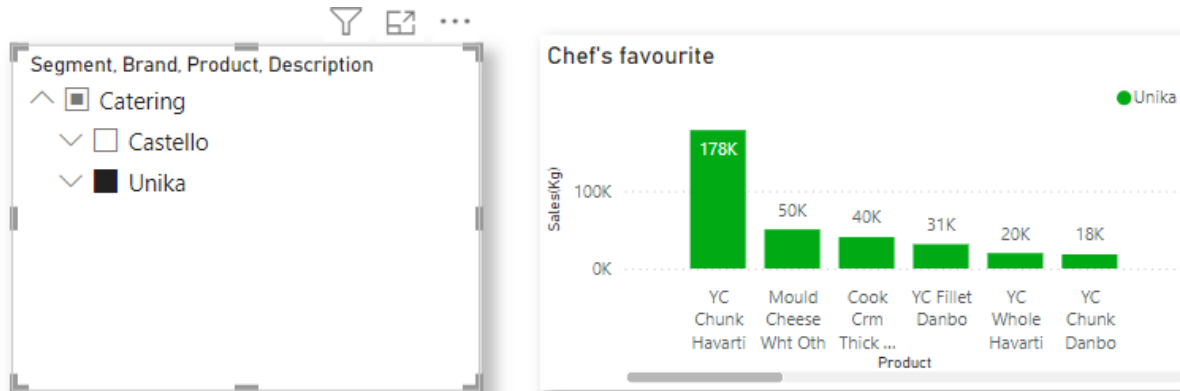

Seasonality

► YC Chunk Havarti

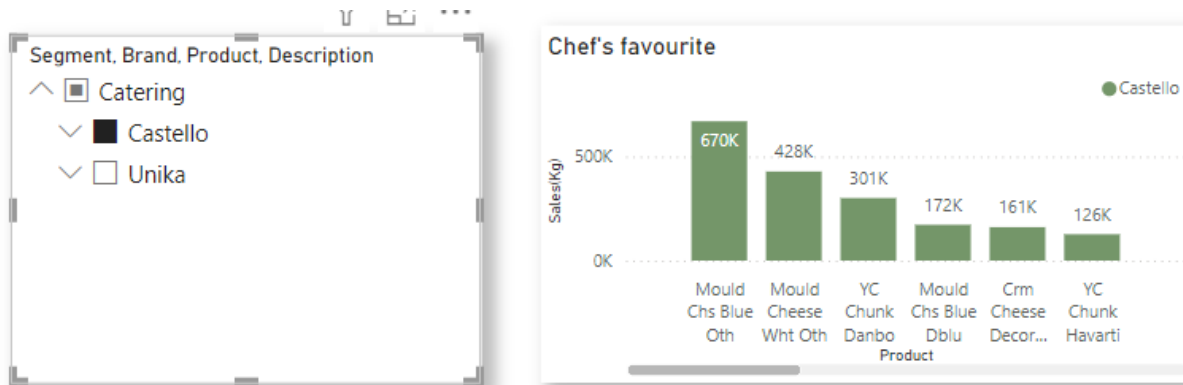

- **Peak Sales:** April and July
- **Potential Reasons:**
 - **April:** Easter, a time for family gatherings and festive meals.
 - **July:** Summer holidays, when outdoor activities and picnics increase cheese consumption.

Chefs' Favourites

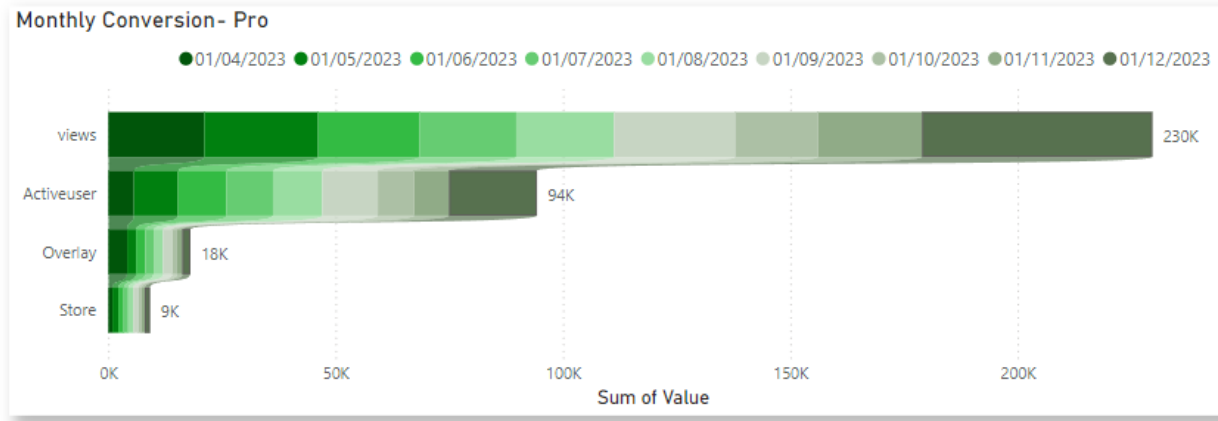

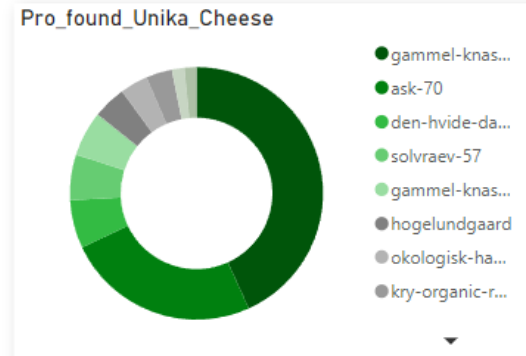

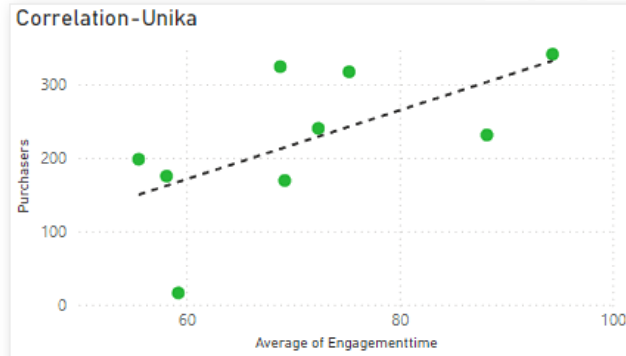

- The **Unika** brand's top product, "YC Chunk Havarti," has sales of 178K kg.
- It is more popular than the Castello equivalent

Chefs' Favourites

- The **Castello** brand has higher sales overall compared to the **Unika** brand, with its top product, "Mould Chs Blue Oth," reaching 670K kg.
- These data suggest that Castello's products, particularly in the "Mould Chs Blue Oth" category, are more popular or have a higher demand compared to Unika's products within the same category, so there is an opportunity to expand Arla Unika into this market

B2B Website

► Longer engagement time on the Arla Pro platform is associated with a higher number of purchasers, suggesting that user interaction with the platform is crucial for sales.

► The most frequently searched Unika cheeses are Gammel Knas, which is the top-searched product. Other popular cheeses include Ask and Den Hvide Dame.

► Monthly conversion: October and November 2023 also show high user activity, likely as preparation for the holidays, but December recorded the highest activity and conversions.

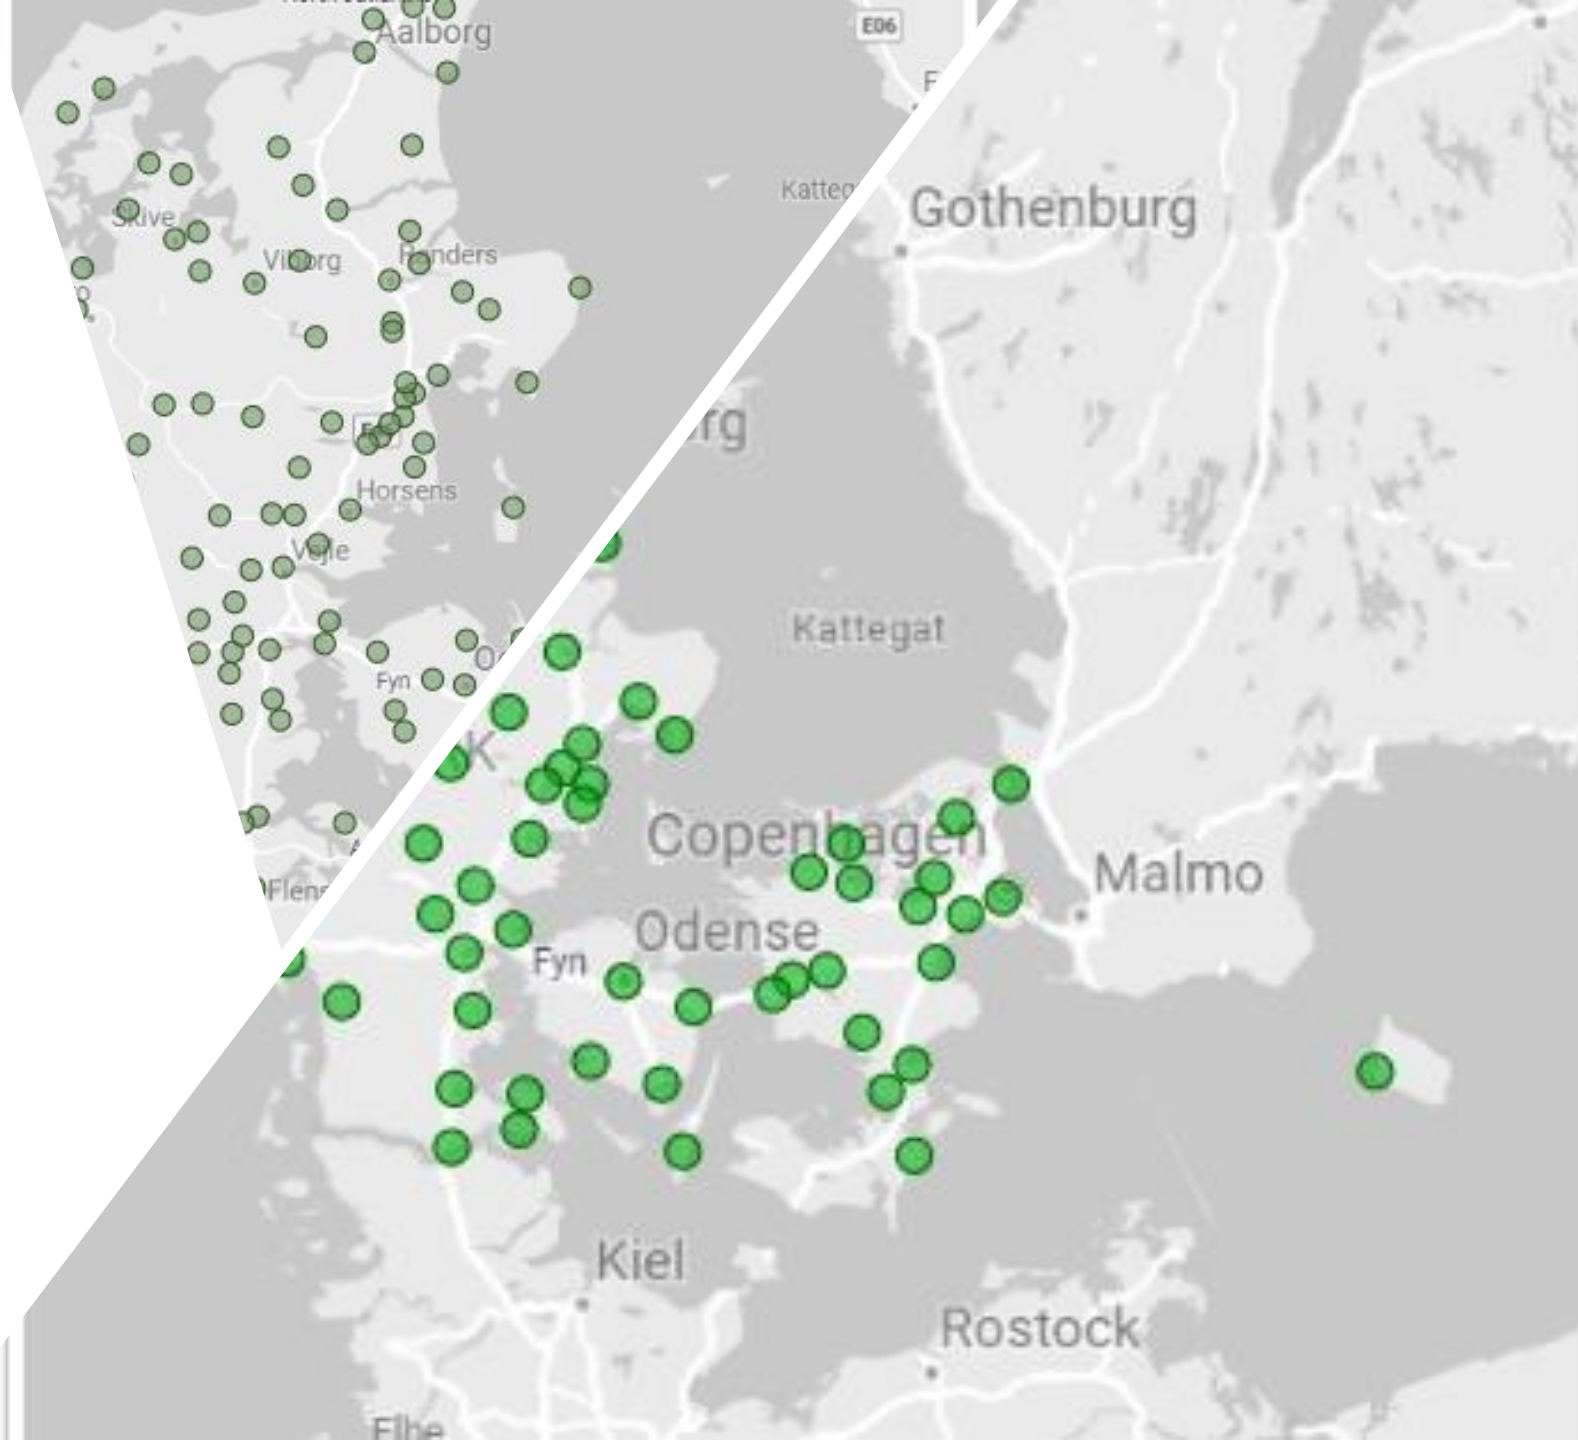

Where

Where can you buy your favourite
cheese?

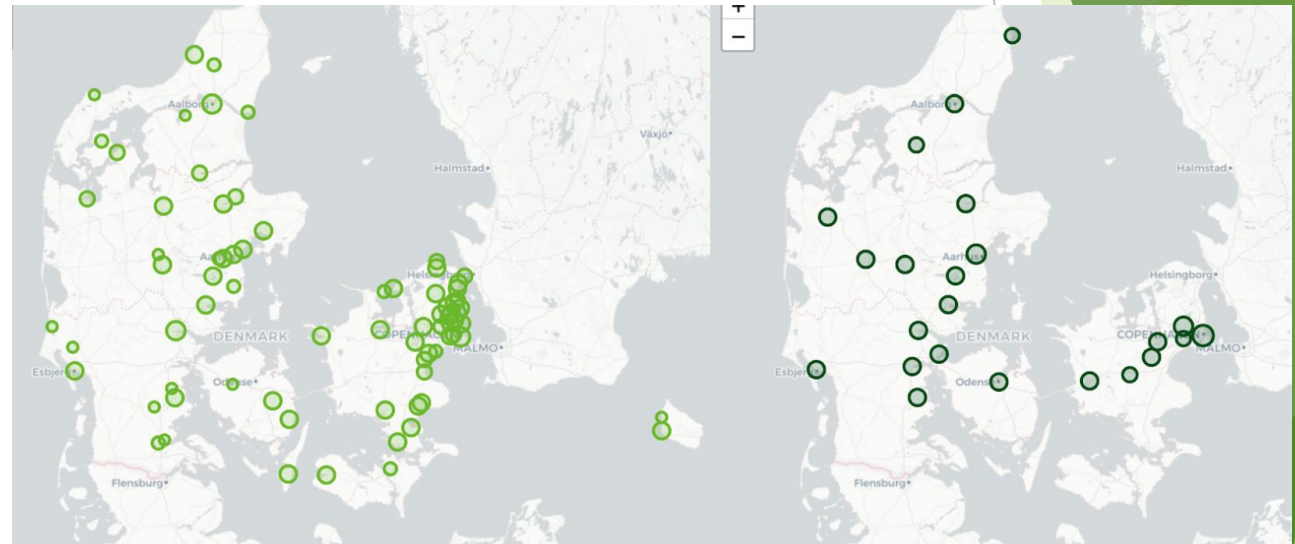

Unika and Castello

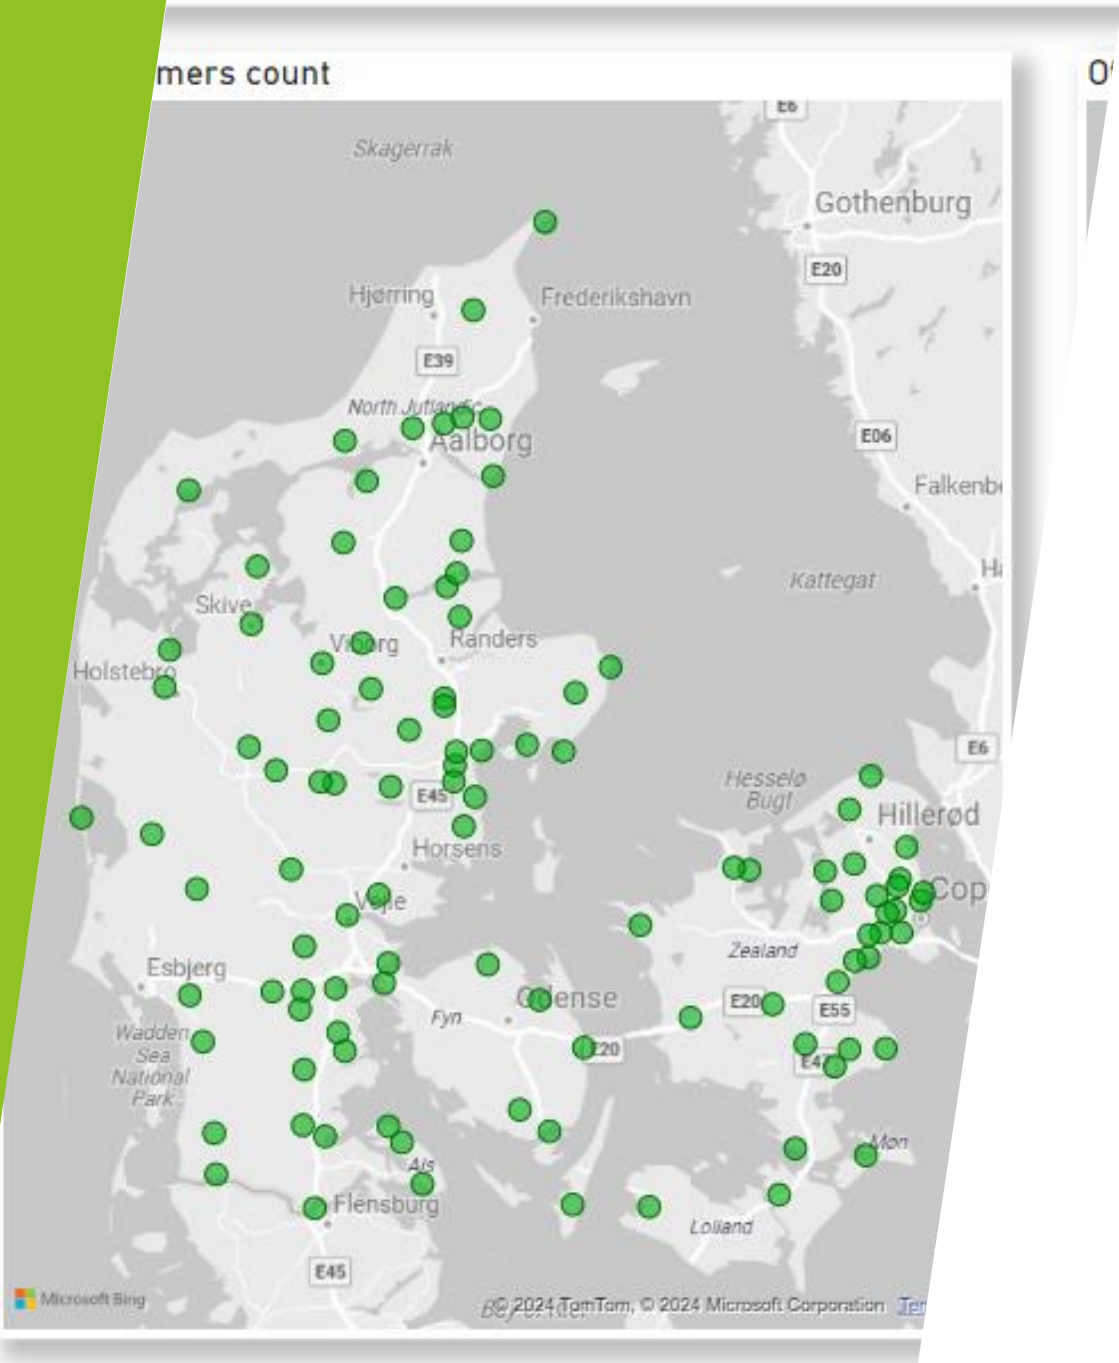

- Both Unika and Castello enjoy high popularity in central and eastern Denmark. Both brands have the potential to expand into western and southwestern Denmark. Focusing on these regions could enhance their market presence. Additionally, the possibility of cross-border expansion into Germany and Sweden is promising for both brands, as there is evident interest in their products.

Frederikshavn, Herning & Slagelse

There is demand on the website but nowhere locally, (either supermarket or specialist shop), for Arla Unika products

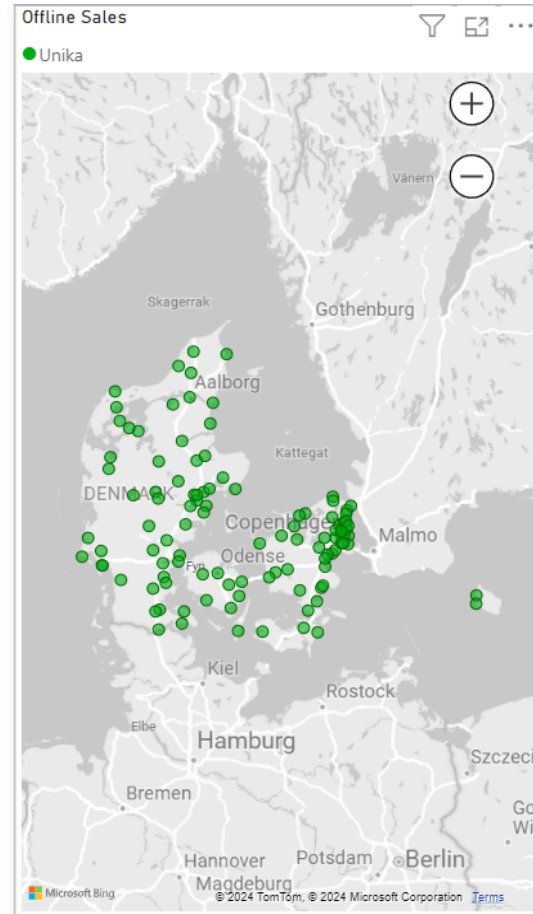

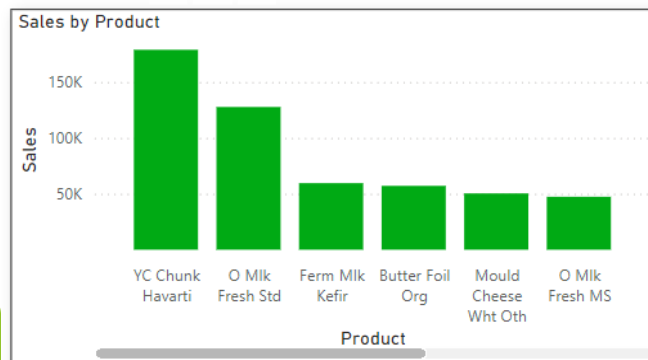

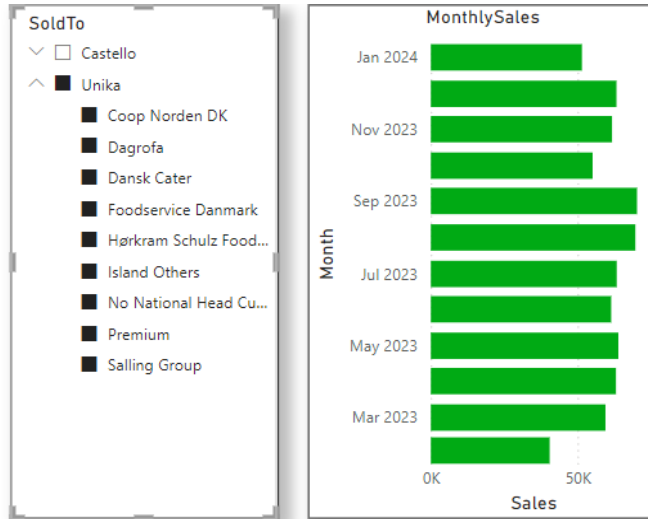

Unika Online and Offline Hotspots

The distribution of offline sales is similar to the distribution of online customers, with a higher concentration in densely populated regions. Locations with the highest number of online customers and offline sales, after CPH and Aarhus are:

- **Aalborg:** High number of online customers and offline sales.
- **Horsens:** High number of online customers and offline sales.
- **Randers:** High number of online customers and offline sales.
- **Odense:** High number of online customers and offline sales.

Both online customers and offline sales are mainly concentrated in larger cities, indicating that these regions are crucial for Unika's business. Smaller towns also show some activity, but it is significantly lower compared to the larger cities.

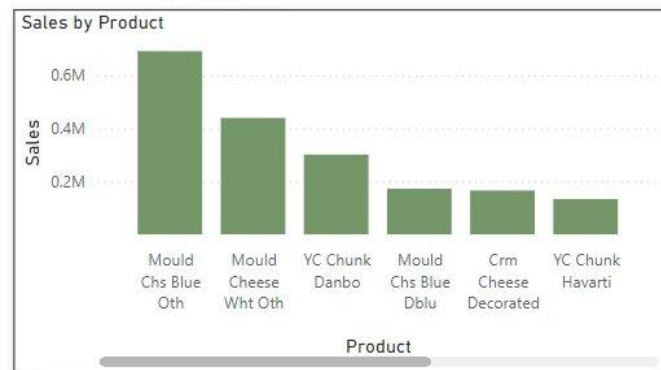

Sales months

► Both Castello and Unika experience their highest sales months during the same periods:

► November 2023: Highest sales for both brands, related to preparations for the Christmas holidays.
 September 2023: Significant sales, likely due to the end of summer and the back-to-school season.
 January 2024: High sales, associated with New Year's shopping.

► Unika's sales distribution is similar to Castello's, with a focus on high-population areas.

Sales months

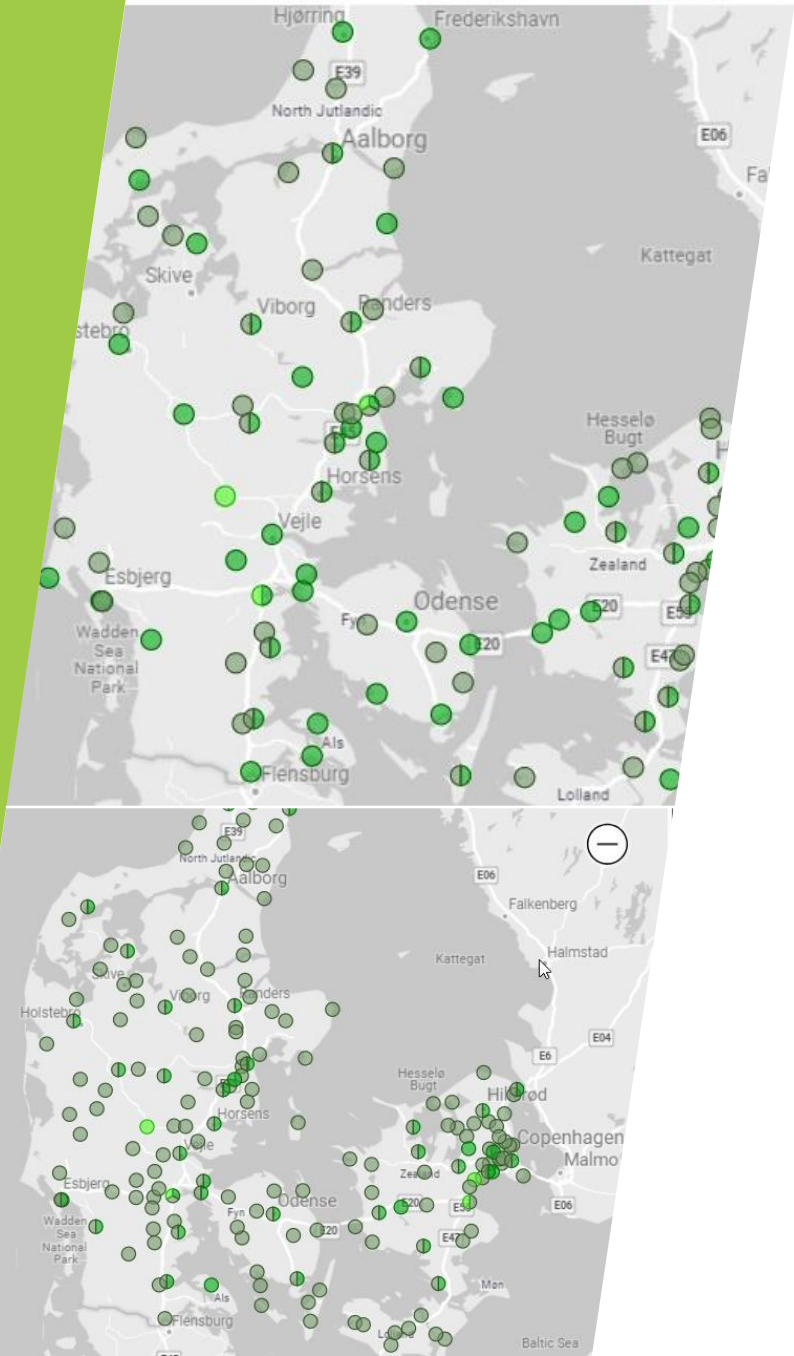

► Both Castello and Unika experience their highest sales months during the same periods:

► November 2023: Highest sales for both brands, related to preparations for the Christmas holidays.
 September 2023: Significant sales, likely due to the end of summer and the back-to-school season.
 January 2024: High sales, associated with New Year's shopping.

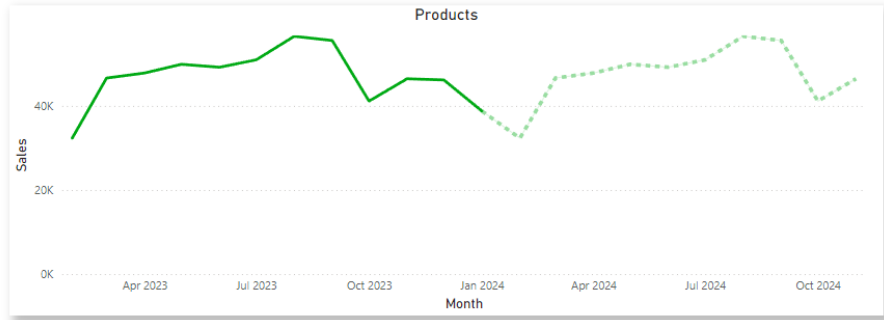

► Unika's sales distribution is similar to Castello's, with a focus on high-population areas.

Sales to Segments

- Both Castello and Unika have similar distribution across the catering, consumer, and other segments. Key cities to focus on for both brands include Copenhagen, Odense, Aalborg, Esbjerg, and Horsens.

Sales forecast

- Slight increases in sales during the summer (July) may be linked to seasonal events like vacations and picnics. The drop in January 2024 could be due to reduced activity post-holidays. The projected peak in July 2024 suggests that summer months are crucial for boosting sales. The expected decline in September 2024 may be a natural drop after the summer, with a slight rebound in October 2024.

Why

Why should you consider it?

Why

Expand Unika Cheese Distribution to Retail Stores

Why: High online interest and sales data suggest a strong demand for Unika cheeses. Making these cheeses available in physical stores can increase accessibility and sales.

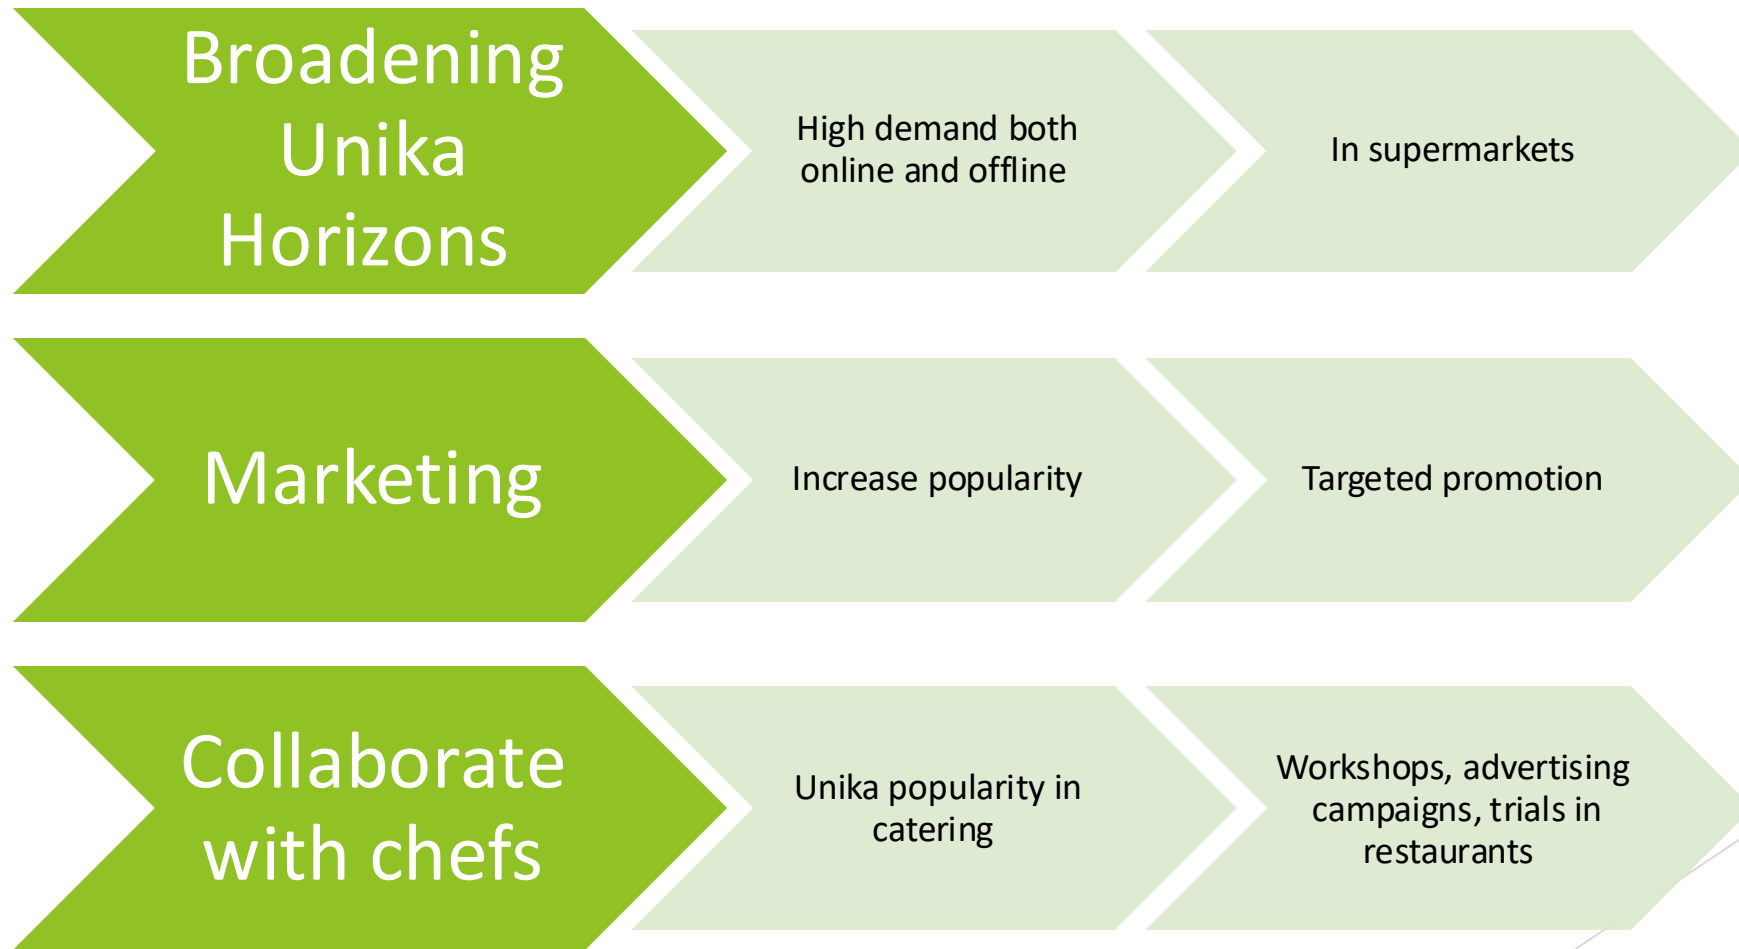

Enhance Online Product Promotion

Why: To maintain and boost online sales while expanding retail presence, ensuring a holistic market approach.

Collaborate with Chefs

Why: Chefs can influence consumer preferences and add credibility to the products. Their endorsement can drive sales both online and in stores.

Strategic Insight

Action

Expand Unika Cheese

Introduce top-selling Unika cheeses into selected supermarkets and more specialty stores.

Promotion Online Product

Optimize the website to improve user experience, launch targeted social media advertising campaigns, and collaborate with culinary influencers to promote the products.

Collaborate with Chefs

Organize culinary workshops, run joint advertising campaigns, and offer product trials in renowned restaurants to leverage the influence of chefs in boosting product credibility and sales.
